On the Home screen select the function desired: Search, Patient, Progress, Travel, or Reports. If you select Patient, you will get an "Add Patient" screen. As a general rule, Patients should never be added before searching to ensure the patient does not already exist since a casualty could have more than one patient record.
If you select Progress or Travel you will be required to search for a patient record. Progress and Travel can only be accessed through a patient record.
If you select Reports, you will go directly to the Reports screen.

Once on the search screen there are numerous ways to search a patient. The most accurate is selecting SSN or Name. The other search fields may result in numerous records found.
If the patient you are searching for is not found, the search will show that no patients were found with the criteria selected. Select the "Add New Patient" button to add a patient or enter a new search criteria.
If you are presented numerous patients that match the search criteria, use the scroll bar to identify the exact individual patient. If found, select the "Edit" button.

Injured/Ill Patient Tracking Help

Patient Screen - Add New Patient

Enter all data that is currently known about the patient. Once complete, select the "Add" button. All "Times (HHMM)" entered will be standard military local time where the patient is located.

All Patients being added as a result of operations in Iraq should be given a "Conflict" code of: Operation Enduring Freedom and a "Multi Cas" code of: Operation Iraqi Freedom.

"Current Location" is currently a free form field, add the exact location of the patient, example:

847th MASH Hospital
Landstuhl Medical Center, Landstuhl Germany
Bethesda Naval Medical Center, Bethesda, Maryland
At Home, 20 Lafayette Street, Stafford, VA
Navy Medical Center, Rota, Spain

Note: "Current Location" Once entered, this field can only be edited/updated on the Progress Screen.

"Current Casualty Status" is the medical status determined by medical personnel.
Note: "Current Casualty Status" Once entered, this field can only be edited/updated on the Progress Screen.

"Patient Closed Date" should be entered when the patient is either place on Convalescence Leave or Returned to Duty.

PNOK (Primary Next of Kin) Information fields - These are very important fields that need attention. The entries in these fields, especially "PNOK Notified By" and "PNOK Notified Date" are very important to Casualty Assistance Calls Officers who may need to contact the family.

"Home/Duty Station" - This information pertains to Home location of the unit that the Servicemember belongs. It is important to ensure the Unit/Base responsible for the Servicemember is informed, example:
A Marine assigned to 1/8 Marines, would be have a Home/Duty station of Camp Pendleton, CA. A Marine assigned to HqSvc BN, MCB Quantico, VA would be Quantico, VA.

Injured/Ill Patient Tracking Help

The Reports function can be selected from any screen. They are group report listings only; they are NOT individual patient reports. Reports selected can be sorted on all report items. If additional reports are REQUIRED to support your function, please contact your Service Casualty Office.

Patient Report - Allows user to generate reports with a case status of: Open, Closed, or All. The most important selection should be Open cases- cases that are being worked.

Moving Report - Allows user to select a date range for those patients pending travel. The most useful report should be for: Open Cases departing for a selected day. This report will display who is moving where and when.

Current Location Report - Allows user to display Open/Closed/All patients by location. If nothing is entered in the Current Location field, patient records from all locations will be displayed. To refine the your search, you can use the % sign to find records including a specific string of characters, example:
You don't know how to spell Landstuhl - Search on "Lands%", or "L%" or even "%and%". These searches would look for anything starting with "Lands", anything starting with "L" or anything having "and" in it.

Major Supporting Command (MSC) Report - Allows user to generate a report with a case status of: Open, Closed, or All by MSC. If no specific MSC is selected from the dropdown menu, the generated report will reflect all MSCs.
